

Stock Lifecycle Operator Guide

Open stock, physical count, month close, stock-card proof, and annual FY close.

TOTAL POLY PRINT ERP - STOCK LIFECYCLE TRAINING FLOW

One stock-cycle truth

Example: count only LDPE code A at Raw Store, only lay-flat rolls at WIP, then post Packing Yard EOD count.

Daily counts, month snapshots, ledger proof, and annual close all point back to posted audit sheets and stock ledgers.

Inventory control route: /inventory/stock-lifecycle

Packing EOD shortcut: `/logistics/packing/consumption` opens the packing count route, but proof lives in Stock Lifecycle.

1. What Each Tab Does

Tab	Use it for	Rule
Overview	Live value, class split, ageing, movement waterfall, dead stock.	Read-only analytics.
Open stock	First migration or first FY opening stock.	Blocked after real movements exist.
Physical count	Plant, location, item, bulk, roll, packing, roll-form, granule-code count.	Only entered rows post.
FY close	Annual Indian FY lock and next FY opening generation.	Not monthly close.
Month close & history	Month snapshot, audit history, stock-card drill.	Does not lock FY.

2. Daily Physical Count Flow

Step	Operator action	System result
1	Select plant and open Physical count.	Rows load from live stock snapshot.
2	Choose All, Bulk, Rolls, or Packing.	Class filter is stored in batch metadata.
3	Optionally filter location, roll form, granule code, category, or item search.	Scope label is preserved in history.
4	Enter counted qty only for checked rows.	Blank rows are ignored.
5	Give reason when variance is 2 percent or above.	Posting is blocked until reason is present.
6	Post physical count.	Bulk, roll, or packaging ledger updates are posted.
7	Review history and stock card.	Opening + Movement = Closing proof is available.

3. Worked Example

Flow	What operator does	Expected proof
Granule code count	Bulk scope, Raw Store, granule code A, counted 95 kg against system 100 kg.	COUNT_SHORT -5 kg; code B untouched.
Roll stock-form count	Rolls scope, lay-flat tube form, count physical label.	Audit line keeps label, width, thickness, form.
Packing EOD	Packing scope, Packing Yard, enter closing qty.	Packaging COUNT_SHORT/COUNT_EXCESS transaction; audit sheet in same history.
Month close	Capture month-end snapshot after daily counts.	Monthly tracker marks snapshot and count sheets.
FY close	Clear blockers and close from FY close.	Locked closing batch and next opening batch.

4. Month Close Versus FY Close

Question	Month close	FY close
Frequency	Monthly, after count sheets are posted.	Once per Indian financial year.
Locking	No lock.	Locks annual FY.
Creates	Reporting snapshot and linked posted count proof.	FY_CLOSE batch and next OPENING_STOCK batch.
Partial?	Yes, proof can be scoped.	No, annual plant close.
Review	Monthly tracker, audit history, stock card.	FY close and closed periods.

The older trend snapshot table is bulk/roll oriented. Packaging proof is still real through packaging transactions and posted audit batches; use Audit sheet history and Stock card drill for packaging review.

5. Operator Checklist And Proof Command

Before posting	After posting
Correct plant, scope, and location selected.	Audit sheet appears in Month close & history.
Roll form or granule code filter applied if needed.	Stock card shows the variance movement.
Only physically counted rows have counted qty.	Overview and closing preview refresh.
Variance reason added when required.	Packing EOD appears in same Stock Lifecycle truth.

Rollback-safe local proof command:

```
/Users/devvarshthakkar/local_repos/erp_total/venv/bin/python scripts/prove_stock_lifecycle_local_flow.py
```
